Practices on Pattern Recognition

Iterative Accumulation

Iterative Accumulation is a very common operation.

It accumulates **target values** iteratively.

Iterative Accumulation: Example

How to calculate the result of

1 + 2 + 3 + 4 + 5 + 6 + 7 + 8 + 9 + 10?

Target values in each iteration:

- Iteration 1: 1
- Iteration 2: 2
- Iteration 3: 3
  - •
  - •
  - •
- Iteration 10: 10

accumulate → **55**

Iterative Accumulation: Python Code

Three Important Elements

result variable
(to store the accumulation result)

```
n = 10
result = 0

for i in range(1,n+1):
    result = result + i

print(result)
```

for loop

target value
